

[prototype design v0.2]

single-button controller for IIDX/BMS use
using 50x33 keys and a 60x60 turntable button

this layout is 1P only right now
it also doesn't specify holes for extra buttons, just the 7 keys+turntable

made with QCAD

[todo]
that button is kind of far for how small it is,
but it seems to be the right distance

[todo]
variant with a 100mm round, flat button turntable
variant with another 50x33 button
variant with 30mm round arcade buttons for keys
you'll still want to find a large button for the turntable
or just wire up several 30mm buttons in parallel to make a larger target
